

Title:-

Exporting and Importing data in MySQL

Objective:-

To design and develop SQL DML statement to demonstrate exporting tables to external files and importing data from external files of different file formats such as CSV, XLSX and TXT.

THEORY:-

Data Export and Import are important database operation that help in transferring data between MySQL and external files.

- Exporting means writing table data to an external file (for backup or sharing)
- Importing means reading data from an external file into a MySQL table (for restoring or updating)
- Common file formats
 - CSV (Comma separated Values):
Data separated by commas easy to open in Excel
 - TXT (Text file): Data separated by tabs or space.
 - XLSX (Excel file): Spreadsheet file exported or imported using MySQL Workbench tools.

IMPLEMENTATION:-

Step 1: Create Database student-db and Table.

```
CREATE DATABASE student-db;
USE student-db;
```

```
CREATE TABLE students (
    roll-no INT PRIMARY KEY,
    name VARCHAR(50),
    age INT,
    course VARCHAR(50)
);
```

```
INSERT INTO students VALUES
(101, 'Asha', 20, 'DBMS'),
(102, 'Rahul', 21, 'OS'),
(103, 'Neha', 19, 'CN');
```

Step 2: Export Data (a) CSV:

```
SELECT *
INTO OUTFILE 'C:/mysql-exports/students.csv'
FIELDS TERMINATED BY ','
ENCLOSED BY '"'
LINES TERMINATED BY '\n'
FROM students;
```

(b) TXT:

```
SELECT *
INTO OUTFILE 'C:/mysql_exports/students.txt'
FIELDS TERMINATED BY '\t'
LINES TERMINATED BY '\n'
FROM students;
```

(c) XLSX : Using MySQL Workbench Export Wizard.

- Right-click table → Table Data Export Wizard - choose XLSX → Export.

Step 3 : Import Data (a) CSV:

```
LOAD DATA INFILE 'C:/mysql_exports/students.csv'
INTO TABLE students
FIELDS TERMINATED BY ','
ENCLOSED BY '"'
LINES TERMINATED BY '\n'
IGNORE 1 ROWS;
```

(b) XLSX : Using MySQL Workbench Import Wizard

- Right click database → Table Data Import Wizard select XLSX → Map columns → Import.

Step 4: Verify Data

~~select~~ SELECT * FROM students;

Output:-

Roll-No	Name	Age
101	Ashu	20
102	Rahul	21
103	Neha	19

Conclusion:-

successfully implemented exporting and exporting operations using sql DML statements and MySQL Workbench.
